LLAGAS, CARL JAMES**

PROBLEM STATEMENT

The DreamHome case study focuses on the problem of efficiently managing the large amount of information involved in property rental operations across multiple branch offices. The company handles staff records, property listings, renters, lease agreements, inspections, advertisements, and viewings, creating the need for a database system that can accurately store, organize, and manage data while supporting daily operations and reducing record duplication.

TARGET USERS AND INTENDED USE OF THE SYSTEM

The target users of the DreamHome system are managers, supervisors, secretaries, and staff members who manage property rentals and office operations. The system is intended to store, organize, and manage information about staff, properties, renters, leases, inspections, and other rental services efficiently.

SYSTEM FEATURES/MODULES

- Staff Management
- Branch Office Management
- Property Management
- Client Management
- Leases Management
- Inspection Management
- Viewing Management
- Search and Search Filter

USER ROLES

- Manager – manages all
- Supervisor – manages branches, properties, owners, clients, viewings, inspections
- Staff – manages branches

TECHNOLOGIES USED

Languages & Markup

- PHP 8, HTML5, CSS3, JavaScript, Dart

Frameworks & Libraries

- Laravel 13 (web backend + API)
- Flutter (mobile app)
- Laravel Sanctum (API authentication)

Database

- PostgreSQL (via pgAdmin 4)
- Raw SQL via Laravel DB Facade (no Eloquent)

Development Tools

- Laragon (local server)
- VS Code (code editor)
- pgAdmin 4 (database management)
- Thunder Client (API testing)
- GitHub (version control)

SCREENSHOTS

A screenshot of a Windows taskbar. The taskbar is dark-themed and contains several application icons: Windows Start button, Search, File Explorer, Microsoft Edge, Google Chrome, and several instances of other applications like a calendar, a music player, and a video player. The system clock in the bottom right corner shows the time as 12:13 AM on 5/26/2026. There is also a notification icon with a number '1' next to it.

SYSTEM WORKFLOW

CONCLUSION

In this project, we successfully developed the DreamHome Property Rental Management System by designing the database, creating the ERD, and implementing all major modules using Laravel, PostgreSQL, HTML, and CSS. Through this system, we gained practical experience in database design, SQL queries, CRUD operations, and full-stack web development.
